

a second recording section capable of recording, on a second recording medium, moving pictures and also pictures to be reproduced as still pictures; and

a mode selector for selecting among a plurality of shooting and reproducing modes, said shooting modes including a mode in which a still picture and information relating thereto are recorded on the first recording medium, a mode in which a moving picture is recorded on the second recording medium, and a mode in which a picture to be reproduced as a still picture is recorded on the second recording medium, said reproducing modes including a mode in which information relating to a still picture recorded on the first recording medium is displayed, a mode in which a moving picture recorded on the second recording medium is reproduced, a mode in which a picture recorded on the second recording medium so as to be reproduced as a still picture is reproduced, and a mode in which a still picture is reproduced out of a picture recorded as a moving picture on the second recording medium.

32. A photographing apparatus as claimed in claim 31,
wherein the information recorded on the first recording medium is information used when a still picture recorded on the first recording medium is printed.

33. A photographing apparatus as claimed in claim 31,
wherein, in any of the modes in which a moving picture is recorded, an aspect ratio of the picture can be varied.

34. A photographing apparatus as claimed in claim 31, further comprising:
a display for displaying a still picture, a moving picture, or information in any of
the reproducing modes.

35. A photographing apparatus comprising:
a first recording section for recording, on a first recording medium, mainly still
pictures together with information relating to the still pictures thus recorded;
a second recording section capable of recording, on a second recording medium,
moving pictures and still pictures; and
a mode selector for selecting among a plurality of shooting and reproducing modes,
said shooting modes including a mode in which a still picture and information relating
thereto are recorded on the first recording medium, a mode in which a moving picture is
recorded on the second recording medium, and a mode in which a still picture is recorded
on the second recording medium, said reproducing modes including a mode in which
information relating to a still picture recorded on the first recording medium is displayed, a
mode in which a moving picture recorded on the second recording medium is reproduced,
a mode in which a still picture recorded on the second recording medium is reproduced,
and a mode in which a still picture is reproduced out of a picture recorded as a moving
picture on the second recording medium.

36. A photographing apparatus as claimed in claim 35,
wherein the information recorded on the first recording medium is information used
when a still picture recorded on the first recording medium is printed.

37. A photographing apparatus as claimed in claim 35,
wherein, in any of the modes in which a moving picture is recorded, an aspect ratio
of the picture can be varied.

38. A photographing apparatus as claimed in claim 35, further comprising:
a display for displaying a still picture, a moving picture, or information in any of
the reproducing modes.

39. A photographic apparatus comprising:
a recording section capable of recording, on a recording medium, moving pictures
and also pictures to be reproduced as still pictures;
a mode selector for selecting among a plurality of shooting and reproducing modes,
said shooting modes including a mode in which a moving picture is recorded on the
recording medium and a mode in which a picture to be reproduced as a still picture is
recorded on the recording medium, said reproducing modes include a mode in which a
moving picture recorded on the recording medium is reproduced, a mode in which a
picture recorded on the recording medium so as to be reproduced as a still picture is

reproduced, and a mode in which a still picture is reproduced out of a picture recorded as a moving picture on the recording medium; and

an aspect ratio selector for varying, in any of the modes in which a moving picture is recorded, an aspect ratio of the picture.

40. A photographing apparatus as claimed in claim 39, further comprising:
a display for displaying a still picture or a moving picture in any of the reproducing modes.
